    Add file greeting.txt

```

5. Faça o rebase do seu branch uppercase com o master (git rebase master).

```

PS C:\Users\rappa\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git rebase master
Successfully rebased and updated refs/heads/uppercase.

```

6. O que acabou de acontecer? Desenhe!

O rebase reescreveu o histórico do meu branch uppercase ao mover o seu ponto de partida para o commit mais recente do master, pegando o meu commit exclusivo que antes estava em uma ramificação separada (formando um "Y") e reaplicando-o no topo da linha principal para eliminar a bifurcação e tornar o histórico totalmente linear. Dessa forma, o branch uppercase agora contém as atualizações do master — como o arquivo README — como se elas já fizessem parte da base desde o início do meu desenvolvimento, permitindo que o merge final seja um simples fast-forward sem a necessidade de gerar commits extras de merge.

```

PS C:\Users\rappa\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git log --oneline --graph --all
* a6a837f (HEAD -> uppercase) Change greeting to uppercase
* 21b3652 (master) Add readme
* e132baa Add content to greeting.txt
* 09f209e Add file greeting.txt

```

7. Agora mude para o branch master.

```

PS C:\Users\rappa\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git switch master
Switched to branch 'master'
PS C:\Users\rappa\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git branch
* master
  uppercase

```

8. Faça o merge do uppercase no master.

```
PS C:\Users\rapha\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git merge uppercase
Updating 21b3652..a6a837f
Fast-forward
 greeting.txt | 2 +
 1 file changed, 1 insertion(+), 1 deletion(-)
```

9. Como o log ficou agora?

```
PS C:\Users\rapha\Documents\Projetos\ExerciciosTMS\git-katas\rebase-branch\exercise> git log
